Almost every household typically has a television and is able to receive a variety of network and cable TV signals. A digital video recorder may record television programs on a digital video disk or a hard disk. A digital video disk is a small flexible disk that is usually used to record video images. The digital video disk may be connected to a computer and encoded for use by the computer to record a television program. In addition, improvements in digital recording techniques have made it possible to record digital data using a video camera. A digital data recorder records digital data (e.g., video and audio) on a digital data disk. The data may be transmitted using Internet network technology. After being transmitted, the data is decoded and displayed on a computer monitor. Thus, a user may record television programs using a digital video camera to produce digital data. The digital data may then be used to record television programs
