I have a custom workflow that i made and everything is fine if i use the WorkflowApplication from the project (in the work folder). But when trying to use the one from the project it gives an exception. The code i'm using is basically this: // Creating the application and then setting the document WorkflowApplication wfApp = new WorkflowApplication(new Uri("/DoingWork.xaml",UriKind.Relative)); wfApp.Start(new Uri("/DoingWork.xaml",UriKind.Relative)); The exception is this: System.ArgumentException: 'Invalid URI: The format of the URI could not be determined.' I've already tried to change the version number from 3.0 to 4.0 but then it says that "The application referenced by the URI could not be found." The file i'm using is in the App folder in the same solution as the rest of the solution. A: Well i finally got it to work. It was like this. I was using a custom window to do the work (DoingWork.xaml) but i was also trying to start it from the MainWindow (Like this: wfApp.Start(new Uri("/MainWindow.xaml", UriKind.Relative))) So my solution was, to change the MainWindow to a custom window and then use the wfApp.Start(new Uri("/DoingWork.xaml", 4bc0debe42
